

# ADD3 Green – Eco-Friendly Floor Graphics Media

## No Overlamine Needed

**ADD3 Green** is an innovative, environmentally responsible synthetic paper pressure sensitive floor graphic material. With no need for an over laminate the cost of materials will decrease and the speed to market will increase while maintaining durability and visual appeal.

This breathable adhesive floor signage material for concrete, tile and other materials seamlessly conforms to the surface, making it easy to install and remove without troublesome air bubbles that trap dirt, moisture, and cleaning solutions, causing unsanitary dirt halos. ADD3 is made with thirty percent post-consumer waste for better durability and printability, ensuring relevant messaging and instructions are clear and readable.

The single-step technology does not require lamination and maintains sharp clarity and breathability for easy install and a non-slip texture for use in the heaviest of trafficked areas, offering an improvement over other traditional floor decals and vinyl floor sticker materials.

**PVC-Free - 30% Post Consumer Content - Made in the USA**
